Resin Bound

Benefits of a Resin Bound Surface....

- Fully Permeable, No more puddles or surface water
- Visually appealing, Increased kerb appeal & property value
- Weed resistant. No more time consuming weeding
- SUDS Compliant with local councils meaning no planning permission required
- Low Maintenance
- Large choice of colours to match your properties asthetics.

What is Resin Bound?

Resin Bound is a system of laying a hard wearing course of mixed resin and dried aggregates onto either a new or existing tarmac or concrete base. Resin Bound is formed by mixing dried aggregates with a two part resin mixture. The mixture is trowelled and polished to give a uniform beautiful flat finish.

What makes Resin Bound so popular?

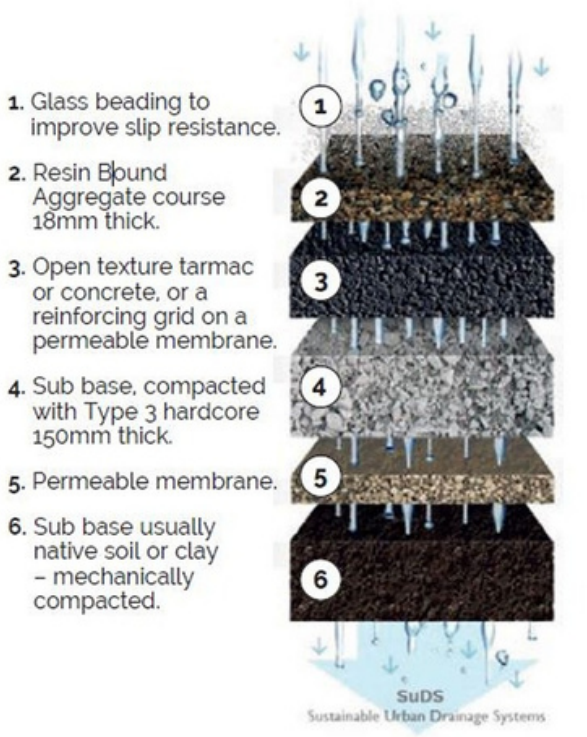

There are many hardsurfacing systems available on the market. From Tarmac to concrete to block paving and imprinted concrete, however nothing matches the performance and visual qualities of Resin Bound

SUDS Compliant

SUDS stands for Sustainable Urban Drainage Systems. Urbanisation has led to an increased flooding risk as a consequence all new driveways have to comply with SUDS regulations.

Does Resin Bound require Planning Permission?

Resin Bound is SUDS compliant, which means it does not require planning permission [providing the sub base on which it is laid is porous or a suitable soakaway exists]. The system can also be laid directly on top of old Tarmac or concrete but will require a suitable soakaway or drainage flow. The existing surface must be sound and crack free. It can handle up to 850 litres of water per M2 per minute.

Large Colour Range.

It is almost impossible to walk past a Resin Bound driveway, pathway or patio without noticing the stunning kerb appeal. Thanks to the wide colour range available, the design possibilities are limitless. Each blend is made up of different aggregates, sizes and textures. From soft yellows and deep golds, to contemporary silver and greys, from monochrome whites, black and greens to russet browns and attractive pinks there is a Resin Bound aggregate colour (or two or three!) for every project.

Design Flexibility

Customers love Resin Bound's flat even appearance and its practicality. The system is so adaptable you can create any shape, motif, symbol or logo imaginable on the surface. Blends of colours and beading allow you to use two colours side by side, enabling superb design options. Discuss your design requirements with one of our sales representatives.
